NATIONAL HEALTH FEDERATION

A NON-PROFIT HEALTH-FREEDOM ORGANIZATION

Legislative Handout – Nov 2026 – online version: http://www.thenhf.com/legislate

1. **No Vaccine Mandates, even during Emergencies.** Vaccine exemptions may not trump an emergency. We need, then, all States to copy Idaho's Medical Freedom Act to ban all mandates. The smothered danger of vaccines requires federal restoration of the right to sue pHARMa for their harms. Emergency shields themselves grant providers a license to commit crime, under the PREP Act, which also should be repealed.
2. **Don't trade one threat to informed consent with a Wireless one**. RFK, Jr's MAHA investigation of what's causing the real epidemic, chronic disease, now includes ElectroMagnetic Radiation. Before Congress floods our neighborhoods, kids' schools, and nearby parks with additional antennas, FCC needs to comply with a 2021 court order to ensure safe limits. We need Rep. Smith's HR 8354 to restore local discretion, and a legislative sponsor for the Clean Ether Act; and another to restore wireless liability AND the ability of property owners to use health effects to oppose cell towers. States should ensure a utility-meter opt-out right.
3. **Stop farm poisoning**. Last Congress' Farm bill would have preempted local organic requirements, as well as weakened genetic-modification (GMO) labeling. More recently, States have sought pesticide liability shields now enacted nationally via a Supreme Court decision. The EPA must apply European-like regulations on pesticides, the USDA must cajole farmers to adopt regenerative practices, and we need the Clean Soil Act.
4. **Reverse persecution of Natural health care**. Years ago, the FDA issued "Guidance" that imposed bankrupting pre-approval hurdles for both traditional homeopathy **and** natural compounding by pharmacists. Further, given public polling support for clear labeling, natural entrepreneurs need to be given back their Free Speech rights – and crony corporations should not be allowed to use misleading language to hide toxins from the label. We need the 28th amendment – for Medical Freedom. States need licensing-free "safe harbors" for natural clinicians.
5. **Don't sacrifice health to the weather-modifying Climate Alarmists**. Climate engineers have been modifying the weather for decades, inducing a daily haze that dims the Sun and aggravates chronic disease. While States should keep passing limits, Congress should support the geoengineering petition pending at the EPA, and reintroduce Ms. Greene's bill or the Roguski proposal.
6. **Free up Health Supply & Demand**. With half of the population chronically ill, we need patients to become price-sensitive shoppers, via larger HSAs and alternatives to ObamaCare insurance. Providers themselves need incentives to expand their expertise in healing, via replacement of licensing with Competitive Certification. And the safety net – consisting of unconstitutional bureaucracies – should be devolved to the 50 States.
7. **Respect patient privacy**. Whether through "wearables" promotion or a central-bank digital currency behavior-coercing scheme, we oppose empowering the post-911 surveillance state. With half of the States protecting some privacy, more States should experiment with these limits. Stop any form of Digital ID that will lead to persecution of dissidents not compliant with the narrative gatekeepers.
